**Team Programming Assignments:**
Students will write programs working in teams of three. The signatures of the team members on a programming assignment indicate that the work is that of the team members, possibly aided by the instructor and/or TA. There will be three or four programming assignments during the semester. At the end of each assignment, you will evaluate the other members of your team on the quality and quantity of their contributions and cooperation. This team evaluation will comprise 10% of an individual's grade for the programming assignment. The instructor will assign teams. You are only allowed to get help on your team programming assignments from your team members, the instructor or the TA.
